

One-Hour | One-Shots: Go from Zero to Hero

Hello, my name is Dr. Keith McNally. I offer a variety of virtual trainings, both live and recorded, to introduce Cloud IT technologies and prepare individuals for IT and Cloud Administrator careers. You will find the three primary courses on my site. Here, you will find quick 1-hour courses. I call them one-hour, one-shots.

What's the difference between my 3-hour courses and my one-shots? Besides time, I limit my one-shots to only learning the technology in the Azure portal. In my 3-hour courses, you gain a better understanding of the business use case, the planning process, and the testing elements that make a cloud deployment successful. My one-shots focus on deploying the infrastructure quickly. You then get to practice on your own.

My one-shot courses are available by appointment.

Course: One-Hour | One-Shot

Configure: Virtual machines in the Azure portal.

Course: One-Hour | One-Shot

Configure: Virtual machines running the web server role.

Course: One-Hour | One-Shot

Configure: Virtual machines that are both scalable and highly available.

Course: One-Hour | One-Shot

Configure: Virtual networks that communicate via VNet peering.

Course: One-Hour | One-Shot

Configure: A route table that sends traffic across two virtual networks.

Course: One-Hour | One-Shot

Configure: Azure storage accounts.

Course: One-Hour | One-Shot

Configure: A Web App published from Visual Studio to the Azure portal.

Course: One-Hour | One-Shot

Configure: Azure Traffic Manager to create high availability for Web Apps.

Course: One-Hour | One-Shot

Configure: A Private DNS zone for your virtual networks.

Course: One-Hour | One-Shot

Configure: Azure Resource Manager templates.
